# Express - Routing and controllers

- Aditya Kumar
   Chief Technology Officer, edwisor.com

We will cover with the following concepts

1) Creating routes

2) Concept of controllers

3) Play with your app.js to include these changes

Creating routes is very easy

edWisor

Create the route folder and file

Attach the necessary callback function

Include the routes and call their function in your app.js

Step 1

Step 2

Step 3

Let create our first route

Let controllers take the control of your logic

- Keeping the application logic in controller gives you a clear bifurcation of logical part of the system.

Create the controller folder and file	Create the function in controllers and export them	Attach the controller function to the desired route
Step 1	Step 2	Step 3

Let create our first controller

The next steps are ...

➔ Concept of REST

➔ Testing the REST API

➔ Whey testing is important
